Celebrating the Third Year of the Journal of Archives of Ophthalmological Research

As we enter the third year of the Archives of Ophthalmological Research, we take a moment to reflect on the remarkable strides we've made since our inception. Over the past year, we celebrated significant milestones, such as publishing major research studies and fostering a thriving community of researchers and professionals. Your continued support has been instrumental, and as we move forward, we are thrilled to share several exciting developments with our readership.

This year, one of the most notable changes is the inclusion of international authors. This expansion marks an important step in broadening the scope of the research we publish, ensuring that our journal reflects a truly global perspective on ophthalmology. We are committed to promoting diversity in thought and research, and the addition of authors from around the world will significantly enrich the quality of our content.

In addition, we have renewed our editorial board to better meet the evolving needs of our community. The new board consists of highly respected and experienced experts from various fields of ophthalmology, bringing fresh perspectives, innovative research, and advanced expertise. This update will help us uphold the rigorous scientific standards and robust peer-review process that our journal is known for.

Looking ahead, our commitment to making the Journal of Archives of Ophthalmological Research a premier platform for scientific knowledge remains unwavering. We are dedicated to publishing impactful studies that advance our understanding of ophthalmic diseases and their treatments. As always, we rely on your continued contributions to help us reach this goal.

With these exciting changes in place, we begin this new year with renewed enthusiasm and commitment. We look forward to another year of enhanced collaboration, innovation, and progress in the field of ophthalmology.

Thank you for your steadfast support. Together, we will continue to push the boundaries of scientific discovery.

With our deepest respect,
Prof. Uğur ACAR
Editor-in-Chief
